Melissa Todd Rsky asked a question in COVID-19 Vaccine Side Effects. 36 mins · 4

Anyone else develop chronic hives/rashes after their shot? I'm 12 weeks post vax (jan 6th) and along with breathing issues, heart rate irregularities, and a few other symptoms I have been getting hives and rashes daily (some are bad some are light). I have never ever had rashes or hives so this is 100% after the vax. Anyone else out there?

I've had a full bloodwork panel done (all clear)  
Chest xrays (all clear)  
EKGs (normal)  
CT scan (clear)  
Pics are a couple examples
